Special Issue Introduction

I plan to publish this issue as a collection of high impact manuscripts focusing on the clinical management of breast cancer with special attention to disparities in breast cancer care, quality of life/financial impact of cancer care, access to care, and survivorship issues.

As a leader in breast cancer and/or cancer outcomes research, I hope that you will consider submitting your work for consideration. I look forward to working with you to produce this special issue. A variety of paper types are acceptable, including research articles, reviews, communications and technical notes, etc.

Benefits

Rigorous mechanism in peer review: one manuscript must be reviewed by at least two relevant experts. We will endeavour to ensure high standards for the review process and subsequent publication by a team of efficient and professional reviewers and scientific editors.

No publication fee: there would be absolutely no charge for publication.

Rapid publication: we will do our best to ensure that accepted papers will be published rapidly with a high quality.

Open Access: As an author you will retain the copyright to your work. By licensing your work under the Creative Commons Attribution License, articles can be re-used and re-distributed without restriction, as long as the original work is correctly cited.

Wide promotions: Published articles will be promoted at academic conferences, through social networks for scientists and relevant indexing services.
